> HOW TO WIN GAMES WITH THE POWERBLAST™

The Rogers PowerBlast helps athletes develop better skills by learning to keep the feet apart, head up, eyes open, and shoulders low. Running backs can work on pumping the legs, covering the ball, and making the second effort. With the optional 2-man sled, train the guards to break a hole for the backs. Linemen and running backs can practice many drills including hit, spin, and run through. Repetitions on the sled pads help develop proper blocking techniques.

Shown: 16 arm Powerblast with optional 2-man Power Line Sled

>>> FEATURES <<<<

SOLID AND STABLE

The heavy-wall steel construction helps stabilize the PowerBlast™ as players run through it, minimizing the creep and bounce seen in other gauntlet-drill machines.

GALVANIZED TUBE

Resists corrosion.

TROLLEY

Rolls smoothly so dummy quickly reacts and travels fast.

REMOVABLE ARMS

After practice or for seasonal storage, remove each arm without tools.

20 ARM OPTION

Challenge your players' strength and endurance with the 20-arm model.

ARM HEIGHT

Adjust the height of the arms to suit the size of your players.

ARM ANGLE

Set each arm at a random angle to make the resistance more lifelike.

ARM SPLITS

Adjust the splits between arms for added realism and increased difficulty.

HANGING DUMMY

With the optional 50-pound Hanging Dummy, drill offensive players to run through the arms then hit and spin to avoid the "tackler." Defensively, hit, wrap, lift and drive the Dummy back, training to keep the opponent from gaining forward motion. Hanging Dummy can be attached to your existing PowerBlast.™
